11.6.3 Any attempt to tamper with, manipulate or interfere with the tracking device fitted to the competition car or any device that fails to record a trace due to external interference will be reported to the Stewards, who may impose a penalty up to disqualification.

11.6.4 Principles on Security and Tracking.

Each device has a unique serial number that is assigned to a crew. During the competition, rally control center (RCC) follows the position and speed of each crew. The STS GPS tracking device is connected with rally control center (RCC) (which gathers all the data. All data is also gathered in the device itself. The device has an autonomic power resource that is enough for all rally. STS GPS tracking device control unit has “SOS” and “OK”, “Roadblock” and “Fire” buttons. By activating “SOS” button, crew members are informing RCC about an accident and that they need assistance ASAP. In this case, calling the phone number on the sticker on the GPS device is also mandatory. If the car stopped in SS due to an accident or technical issues, by pressing “OK” button, crew members inform RCC about the race car being stopped on SS and no additional assistance is needed.

Attention! If the crew has stopped in the special stage for a longer period than 10 seconds, even when the crew is still trying to continue participation, crew members must press „OK“ button on STS GPS tracking device control unit. Mobile phones of the crew members must always be on (or switched on within 60 seconds) so that the rally control centre (RCC) could acquire current information about the situation. If the crew receives a Red Flag signal from the device, also known as a signal of danger (Loud sound and RED indicators on STS GPS tracking device control unit), the „OK“ button must be pressed for 3 seconds so that RCC receives Confirmation from the crew . The crew must slow down the car and follow marshal instructions accordingly.
